Profile

I am a software engineer with more than 6 years of commercial experience. I have organizational and problem-solving skills with a high level of self-motivation for work. I am easy and fast learn new technologies, frameworks, tools, etc.

I am an adaptable person. I have worked with different customers. They had disparate requirements and expectations of me. I have been able to adjust my possibilities and skills to meet each of their needs.

I am good at producing quality work in a team environment. In addition, I am very comfortable with public speaking.

Seeking to apply my experience and skills to benefit your company as a .NET developer.

I am tired to be unrecognized developer and it is a reason why I want to switch to .NET technologies stack and become a part of the "true developers" community
